## PROFESSIONAL DVR SYSTEM

3DEyes digital video surveillance system is professional application with multiple key features. It is built upon client-server architecture and provides a perfect solution for large and medium-scale installations.

The 3DEyes system is based on a video-processing software core, and has distinctive features like:

- Easy Installation
- Simple Configuration
- Convenient Control

### Features Include:

1. Multi-zone video motion detector
2. Remote monitoring, control and set-up of unlimited number of servers
3. Immediate access to backup records
4. Simultaneous multi-channel playback of recorded data
5. Remote listening to a real-time audio flow or stored records, advanced replay control and alarm detectors' status monitoring via standard clients and HTTP-clients.
6. Advanced MotionWavelet compression algorithm provides significantly higher image quality at smaller file sizes of recorded images
7. "Comb" effect removal (de-interlacing) at maximum resolution
8. Easy management of user specified layouts.

### Functions:

- Displays up to 32 cameras at a single virtual screen. The number of virtual screens is not limited.
- Records images from up to 16 cameras simultaneously in continues mode, using schedule or in case of specified events
- Synchronous audio recording
- Control over PTZ functions ( Videotec, Lilin, Dynacolor, Samsung, Pelco, Vortex, Sensormatic, Kalatel)
- Alarm notification by e-mail, phone or SMS
- Remote control and video monitoring over the Internet by means of standard web browsers
- Audible notification upon every event
